\*\*\*\*\* Please answer and initial the following \*\*\*\*\*

	YES	NO	INITIAL
<b>Is the jobsite accessible for delivery with a large truck ?</b> (Tractor-trailer 80 feet long) Our large trucks prohibit deliveries on single lane roads, back alleys and on steep grades.			
<b>Is the intended route to the jobsite weight restricted to less than 80,000 pounds ?</b> Weight restricted roads or bridges will prohibit delivery. Many states in the northeast apply frost laws to roadways in the spring. Metal Sales <u>will not</u> violate weight restrictions.			
<b>Are there low bridges, wires or trees that will prevent the truck from safely getting to the jobsite ?</b> Minimum height clearance required is 13'6". Also, we will not operate cranes in close proximity to any overhead wires.			
<b>Is the delivery location on a "through street" with adequate room to turn a big rig around ?</b> We will not get our drivers into any difficult maneuvering positions which increase our liability exposure to property and/or equipment damage.			
<b>Is there an alternate delivery site if for any reason the actual jobsite is not accessible?</b> Frequently contractors have access to a small trailer that we could boom the material onto if the site is not accessible with our truck.			
<b>I understand that booms are only used to lower product to the ground. MSMC <u>WILL NOT</u> boom material onto a roof or structure or roof rack on a truck.</b>			
<b>Additional Instructions:</b>  			
<b>Jobsite has been checked by contractor/end user and meets criteria for Metal Sales delivery.</b>			
<b>Name of contractor/end user</b>	<b>Phone</b>
